

# VaultFi Economics Audit Report

To Whom It May Concern,

I, AT [REDACTED], have audited the statements listed below regarding VaultFi's economic model and protocol.

I confirm that the following statements are accurate based on the conducted audit:

## 1. Long-term Vision

VaultFi's long-term vision of establishing a yield-bearing protocol powered by revenue-generating businesses is feasible and sustainable.

## 2. Bonus Reward Mechanisms

VaultFi's bonus reward mechanisms are strategically designed to increase user adoption and reward long-term stakers.

## 3. Comparative APY (Annual Percentage Yield) Analysis

VaultFi provides a higher APY than the average S&P 500 returns (~10%) for the first year, even without any form of revenue injection into the treasury.

## 4. Savings Interest Comparison

VaultFi provides a higher APY (Annual Percentage Yield) than the average bank account savings interest rate without any form of revenue injection into the treasury for the first 4 (four) years.

## 5. Sustainable Methodology

VaultFi uses a sustainable methodology for its APY (Annual Percentage Yield) calculation to ensure that the promised bonus rewards (long-term staking and referral rewards) can be fulfilled by excluding those tokens from the staking rewards APY calculation.

## 6. Disclaimer

The above statements are based on the data and projections supplied by VaultFi and assume that all underlying assumptions and methodologies are accurately implemented. This review does not constitute an assurance of performance or guarantee of results, and potential investors should conduct their own due diligence

I have thoroughly reviewed these aspects of VaultFi's economic model and protocol and confirm their accuracy based on the audit conducted.

Sincerely,

Auditor's Full Name: S. [REDACTED]

Auditor's Position: Financial Analyst
